ABOUT US

We are a young, dynamic company, securing comprehensive services in the field of waste liquidation, from removal to the actual liquidation or recovery of the given waste according to the requirements of individual clients. We dispose of all types of hazardous, liquid, solid, inert and other waste. We offer treatment and recycling of waste throughout Slovakia. Our company offers comprehensive services in construction, that is groundwork, excavation, demolition, construction and renovation work, which have become part of our main business, along with comprehensive liquidation of waste originated during work.

Our other activity in the area of hazardous waste processing includes the solidification of sludge and dust, decontamination of waste by applying physical methods, decontamination of waste using chemical methods, storage of waste, decontamination and reclamation of dumping sites and waste. PROSOL, s.r.o. has undertaken several projects linked with the shutdown of industrial premises and their demolition. Besides the actual implementation of these projects the activity also covers buildings, factory exploratory development work, sampling and analysis of costs for disposal.
